Gain an in-depth understanding of the large number of common problems found in ABAP programs and have a robust methodology for fixing problems when you find them. This book also shows you how to prevent them from occurring in new programs. A large chunk of the world's biggest organizations use SAP software and virtually all of them have very large amounts of custom code. However, a lot of that custom code is not as good as it could be. In this book we look at why object-oriented programming is the basic building block for improved program quality and at the test-driven development that this enables. We cover the three pillars of clarity, stability, and high performance on which a high-quality ABAP program stands. You will then move on to the user interface, which needs its own set of standards for high quality. In the final chapters, you will learn about specialist topics such as user exits, making sure code will run on the latest releases of SAP, and how to add your own automated custom code quality checks. What You Will Learn Know why object-oriented programming and test-driven development are the cornerstones of high-quality custom code Ensure that the three pillars of clarity, stability, and high performance are fulfilled Make sure your applications are user friendly Ensure that your custom code works on newer SAP releases Create your own custom code quality checks Who This Book Is For ABAP developers who started yesterday or have been programming for 20 years

A day does not go by without a news article reporting some amazing breakthrough in artificial intelligence (AI). Many philosophers, futurists, and AI researchers have conjectured that human-level AI will be developed in the next 20 to 200 years. If these predictions are correct, it raises new and sinister issues related to our future in the age of intelligent machines. Artificial Superintelligence: A Futuristic Approach directly addresses these issues and consolidates research aimed at making sure that emerging superintelligence is beneficial to humanity.

While specific predictions regarding the consequences of superintelligent AI vary from potential economic hardship to the complete extinction of humankind, many researchers agree that the issue is of utmost importance and needs to be seriously addressed. Artificial Superintelligence: A Futuristic Approach discusses key topics such as: AI-Completeness theory and how it can be used to see if an artificial intelligent agent has attained human level intelligence Methods for safeguarding the invention of a superintelligent system that could theoretically be worth trillions of dollars Self-improving AI systems: definition, types, and limits The science of AI safety engineering, including machine ethics and robot rights Solutions for ensuring safe and secure confinement of superintelligent systems The future of superintelligence and why long-term prospects for humanity to remain as the dominant species on Earth are not great Artificial Superintelligence: A Futuristic Approach is designed to become a foundational text for the new science of AI safety engineering. AI researchers and students, computer security researchers, futurists, and philosophers should find this an invaluable resource.

In *The Ritual Process: Structure and Anti-Structure*, Victor Turner examines rituals of the Ndembu in Zambia and develops his now-famous concept of "Communitas." He characterizes it as an absolute inter-human relation beyond any form of structure. *The Ritual Process* has acquired the status of a small classic since these lectures were first published in 1969. Turner demonstrates how the analysis of ritual behavior and symbolism may be used as a key to understanding social structure and processes. He extends Van Gennep's notion of the "liminal phase" of rites of passage to a more general level, and applies it to gain understanding of a wide range of social phenomena. Once thought to be the "vestigial" organs of social conservatism, rituals are now seen as arenas in which social change may emerge and be absorbed into social practice. As Roger Abrahams writes in his foreword to the revised edition: "Turner argued from specific field data. His special eloquence resided in his ability to lay open a sub-Saharan African system of belief and practice in terms that took the reader beyond the exotic features of the group among whom he carried out his fieldwork, translating his experience into the terms of contemporary Western perceptions. Reflecting Turner's range of intellectual interests, the book emerged as exceptional and eccentric in many ways: yet it achieved its place within the intellectual world because it so successfully synthesized continental theory with the practices of ethnographic reports."

Limited Time Promotional Offer Tao Te Ching - The Classic Book of The Way And Virtue The Tao-Te-Ching is an anti-authoritarian treatise which posits that the way of virtue lies in non-action (Wu Wei) through a recognition of the natural, universal force known as the Tao. The Tao flows without effort and, like water, goes where it will without striving and effects change and growth. To be virtuous, one should emulate the Tao and engage in non-action (not forcing an effect or outcome). Human-made laws, it claims, cannot make one virtuous and cannot contribute to good behavior, inner peace, or empathy with others because they are not in tune with nature. It is only by recognizing the Tao, and one's connection to it and all things, that one may achieve these goals. To recognize the Tao, one must know what it is, and so it is defined in the first chapter: The Tao (The Way) that can be spoken of is not the Constant Tao; The name that can be named is not a Constant Name. Nameless, is the origin of Heaven and Earth; The named is the Mother of all things. Thus, the constant void enables one to observe the true essence. The constant being enables one to see the outward manifestations. These two come paired from the same origin. But when the essence is

manifested, it has a different name. This same origin is called "The Profound Mystery." As profound the mystery as it can be, It is the Gate to the essence of all life. Lao Tzu: The Old Master Lao Tzu was an ancient Chinese philosopher and poet, well-known for penning the book Tao Te Ching. He was the founder of philosophy of Taoism, a religious and ethical custom of ancient China. He is largely respected as a religious deity in various traditional Chinese religious schools of thought. He is also believed by some to be an older contemporary of the famous philosopher Confucius. The 'Tao Te Ching', literally meaning 'The Way and Its Power' presents the idea of 'Tao' as being the end all and be all of existence. It is extremely powerful, yet down to earth. It is the source of all being in the world. The book intends to guide people on how to return to the laws and ways of nature to maintain the balance of the Tao. Lao Tzu's philosophy was a simple one. He was against putting effort and striving, as he thought struggle is not only futile but also hinders productivity. In his theory of 'wu-wei', he advises to simply do nothing. By this he means not to go against the forces of nature, wait for the gush of events nature brings to you and dive right in. He advised not to struggle to change the natural order of things, but to bring spontaneity to one's actions as one holds on to the nature's way of life. Followers of Taoism believe that striving for nothing will never lead them to failure. The one who has never failed is always successful, thus becoming powerful. Lao Tzu's journey began as he set foot towards the western border of China, currently Tibet. He was saddened by what he saw around him: men being diverted away from nature and the goodness it brings. A guard he met on the border asked Lao to write down his teachings as he went. This is when he wrote the famous Tao Te Ching, a 5,000 character account of his thoughts and philosophical ideas.
