This volume is a collection of papers from the 1st International Conference on Historical Lexicography and Lexicology at the University of Leicester in 2002. The purpose of the conference was to bring together scholars and academics from around the world working as scholars and editors on historical dictionaries or as practising lexicographers. The papers are, accordingly, arranged in two sections, reflecting the distinction between those individuals working on the historical development of dictionaries and those considering the lexicological problems and challenges facing the lexicographer in attempting to represent as fully and justly as possible historical forms of the English language.

The contributors to "Translation and Medicine" address several broad aspects of medical translation, from the cultural/historic framework of the language of medicine to pragmatic considerations of register and terminology. Their articles highlight some of the contributions translation has made to medical science and addresses some of the questions raised by those who escort the advances of medicine across language and cultural barriers and those who train the next generation of medical translators. Section 1 covers some Historical and Cultural Aspects that have characterized the language of medicine in Japan and Western Europe, with special emphasis on French and Spanish; Section 2 opens some vistas on The Medical Translator in Training with two specific university-level programs in Switzerland and in Spain, as well as an in-depth analysis of who makes the better medical translator: the medically knowledgeable linguist or the linguistically knowledgeable medical professional; and Section 3 looks at several facets of The Translator at Work, with discussions of the translator-client relationship and the art of audience-specific translating, an insider's view of the Translation Unit of the National Institutes of Health, and a detailed study of online medical terminology resources.

Statistics on the translation market consistently identify medicine as a major thematic area as far as volume or translation is concerned. Vicent Montalt and Maria Gonzalez Davis, both experienced translator trainers at Spanish universities, explain the basics of medical translation and ways of teaching and learning how to translate medical texts. *Medical Translation Step by Step* provides a pedagogical approach to medical translation based on learner and learning-centred teaching tasks, revolving around interaction: pair and group work to carry out the tasks and exercises to practice the points covered. These include work on declarative and operative knowledge of both translation and medical texts and favour an approach that takes into account both the process and product of translations. Starting from a broad communication framework, the book follows a top-down approach to medical translation: communication ? genres ? texts ? terms and other units of specialized knowledge. It is positively focused in that it does not insist on error analysis, but rather on ways of writing good translations and empowering both students and teachers. The text can be used as a course book for students in face-to-face learning, but also in distance and mixed learning situations. It will also be useful for teachers as a resource book, or a core book to be complemented with other materials.

Leonard Sowerby's self-healing manual for women, *The Ladies' Dispensatory*, emerged in England in 1652 amidst an abundance of medical self-help books for the lay citizen. Written for both the common patient and the amateur health provider, these manuals of home remedies provided their readers with a variety of potential solutions to common ailments or disease. Sowerby's *Dispensatory* was written primarily for curing women's health problems, and in that regard, focuses heavily on gynecologic problems (the *Dispensatory* includes numerous preparations for inducing abortion), breast complaints, personal hygiene and cosmetic applications. Balaban, Erlen and Siderits have resurrected Sowerby's original manuscript and have provided both historical and medical explanation of its uses and usefulness.

From a common garlic remedy to 'fortify the brain' to 'a hog's heel, burned to powder' for easing colic, *The Ladies' Dispensatory* is a delightfully unique look at health and hygiene in the seventeenth century. Also includes nine maps.
