Trolls haunt the snowy forests, and terrifying monsters roam the open sea. A young woman journeys to the end of the world, and a boy proves he knows no fear. This collection of 16 traditional tales transports readers to the enchanting world of Nordic folklore. Translated and transcribed by folklorists in the 19th century, and presented here unabridged, the stories are by turns magical, hilarious, cozy, and chilling. They offer a fascinating view into Nordic culture and a comforting wintertime read. Ulla Thynell's glowing contemporary illustrations accompany each tale, conjuring dragons, princesses, and the northern lights. This special gift edition features an embossed, textured case and a ribbon marker.

Fairies are real, and they're all around us! Award-winning author-illustrator Phoebe Wahl offers a fanciful and beautifully illustrated peek into the hidden world of fairies, sprites, and other magical creatures. A girl searches for fairies in her backyard and the woods beyond, following little clues and traces of magic. Fairies and other magical creatures can be found on every page, hidden among the flowers, trees and pebbles. But although readers can see them, the girl keeps searching, just one step behind... In the end, it is clear (both to the girl and readers) that there is magic all around, even when it's hidden in plain sight. Phoebe Wahl takes us deep into the world of fairies, and her vibrant, multi-textured woodland scenes are every bit as enchanting as the creatures therein. A gorgeously illustrated paean to imagination and the natural world. "Delightful . . . This gently magical outing will appeal not only to longtime lovers of European folklore, but also to fans of the popular "fairy door" phenomenon."--Kirkus Reviews

Special Focus editor: Natasha Lushetich Series editors: Rüdiger Ahrens, Florian Kläger, Klaus Stierstorfer Symbolism is cohesive. It gathers heterogeneity over time, across fields of human endeavor and systems of communication. Non-sequiturs, paradox and tautology, appear dissipative. Yet they are highly productive in reticular and fractal ways. Suffice it to look at the philosophical tautology of Parmenides's kind, which suggests that being "is"; at the practice of

the koan, which collapses dualistic thinking by way of incompatible propositions, such as "the Eastern hill keeps running on the water"; at logical paradoxes in which the operative logic is sabotaged by its own means, as in Hempel's paradox; at absurdist dramatic texts in which protagonists record empty time in order to mark the emptiness of the time they are recording, as in Beckett's Krapp's Last Tape; or at paradoxical games like Maciunas's Prepared Table Tennis played with paddles that have huge holes in them. In all of these examples, the existence-apprehending processes occur via unexpected itineraries, in vacant but nevertheless enunciative codes, in seemingly futile, yet calibrating performances, and in a temporality that is the cumulative time's "other." They catapult the mind into the realm of the extra-linguistic, the para-logical and the meta-experiential, or they transfigure it through a series of reticular iterations. Forty years after Varela et al's groundbreaking work on the embodied, emotional and environmentally embedded mind – that marked a definitive departure from its former strictly rational conception – there is a need to re-examine the territory that lies beyond mind for a different reason: the proliferation of algorithmic logics that rely on the idea of a rational agent (human or algorithmic) making logical, self-serving decisions. This special issue explores neither-rational-nor-irrational forms of thinking and making. It sketches a cartography of a-rational processes of meaning- and knowledge-production that operate across numerous sites, practices, and disciplines: visual and media art; literature; art history; music; dance; film; intermedia and photography. Part I "Ahistoricity, Assemblages and Interpretative Reversals" focuses on the legacy of the (neo) avant-garde and amodernism. Part II "Destinerrance, Labyrinths and Folds" investigates the ways in which the Derridian delays/detours and the Deleuzian folding function as concrete ways of embodied knowledge-production. Part III,

"Immanent Transcendence", offers a glimpse into the reticular and iterative structuring of transcendence that does not pre-exist immanence but is its residue.

Your voice as biometric data, and how marketers are using it to manipulate you Only three decades ago, it was inconceivable that virtually entire populations would be carrying around wireless phones wherever they went, or that peoples' exact locations could be tracked by those devices. We now take both for granted. Even just a decade ago the idea that individuals' voices could be used to identify and draw inferences about them as they shopped or interacted with retailers seemed like something out of a science fiction novel. Yet a new business sector is emerging to do exactly that. The first in-depth examination of the voice intelligence industry, *The Voice Catchers* exposes how artificial intelligence is enabling personalized marketing and discrimination through voice analysis. Amazon and Google have numerous patents pertaining to voice profiling, and even now their smart speakers are extracting and using voice prints for identification and more. Customer service centers are already approaching every caller based on what they conclude a caller's voice reveals about that person's emotions, sentiments, and personality, often in real time. In fact, many scientists believe that a person's weight, height, age, and race, not to mention any illnesses they may have, can also be identified from the sound of that individual's voice. Ultimately not only marketers, but also politicians and governments, may use voice profiling to infer personal characteristics for selfish interests and not for the benefit of a citizen or of

Publishers Weekly bestseller · A joyful and accessible homeschool guide to making learning a part of everyday life Parents who are deeply invested in their children's education can be hard on themselves and their kids. When exhausted

parents are living the day-to-day grind, it can seem impossible to muster enough energy to make learning fun or interesting. How do parents nurture a love of learning amid childhood chaos, parental self-doubt, the flu, and state academic standards? In this book, Julie Bogart distills decades of experience--homeschooling her five now grown children, developing curricula, and training homeschooling families around the world--to show parents how to make education an exciting, even enchanting, experience for their kids, whether they're in elementary or high school. Enchantment is about ease, not striving. Bogart shows parents how to make room for surprise, mystery, risk, and adventure in their family's routine, so they can create an environment that naturally moves learning forward. If a child wants to pick up a new hobby or explore a subject area that the parent knows little about, it's easy to simply say "no" to end the discussion and the parental discomfort, while dousing their child's curious spark. Bogart gently invites parents to model brave learning for their kids so they, too, can approach life with curiosity, joy, and the courage to take learning risks.
