In *Managerial Economics* Jeffrey Perloff and James Brander use real-world issues and examples from actual markets to show future managers how economic principles can be used in business decisions. In-text examples and boxed mini-cases use actual data to illustrate how to use basic models. For example, to illustrate rivalry in oligopolistic markets, the authors look at rivalry between United and American Airlines and between Coke and Pepsi. Mini-case examples include why American Apparel is vertically integrated and why upscale manufacturers limit the number of designer hand-bags a customer is allowed to buy. To help future managers learn to solve new problems, Perloff and Brander repeatedly demonstrate problem-solving through in-text Q&As. Each Q&A poses an important managerial or economic issue and demonstrates how to solve it using a step-by-step approach. This book explores the extent to which economic theory is able to provide the theoretical foundations of strategic management. To this end it draws on the philosophy of science; microeconomic theory; and different approaches to strategic management. The work shows that many of the propositions of strategic management are deducible from the economic theories considered. It argues that these propositions should be made open to empirical testing and that a unified theory of strategic management should be developed. Thus the book addresses a current major concern of theorists - that strategy remains 'atheoretical' and that this reduces the predictive power of the subject and hampers further theory development. The essential contribution made is that economic theory should be systematically explored in order to establish the foundations of business strategy.
