From Snuff: 'Vimes' prompt arrival got a nod of approval from Sybil, who gingerly handed him a new book to read to Young Sam. Vimes looked at the cover. The title was *The World of Poo*. When his wife was out of eyeshot he carefully leafed through it. Well, okay, you had to accept that the world had moved on and these days fairy stories were probably not going to be about twinkly little things with wings. As he turned page after page, it dawned on him that whoever had written this book, they certainly knew what would make kids like Young Sam laugh until they were nearly sick. The bit about sailing down the river almost made him smile. But interspersed with the scatology was actually quite interesting stuff about septic tanks and dunnakin divers and gongfermors and how dog muck helped make the very best leather, and other things that you never thought you would need to know, but once heard somehow lodged in your mind.'

'This is a fascinating book, by a leading researcher, covering one of the most exciting areas of modern nutritional research - how what we eat impacts our gut and brain. The combination of personal stories and cutting edge science is a real winner.' Michael Mosley You feel how you eat. We accept that the quality of our diet affects the health of our heart and liver. So why wouldn't diet - good or bad - affect the health of our brain? This is the question that Australian scientist Felice Jacka set out to answer. Having suffered depression and anxiety as a young woman, she wanted to understand the role diet plays in our overall mental and brain health. What she found through her own research and that of other eminent scientists worldwide will revolutionise the way we think about what we eat and how we care for our brains. * Obesity and depression are two major causes of disease and disability across the globe, and each influences the other. *Food does affect mood: highly processed foods increase depression risk, while a balanced, whole-food diet can prevent depression and improve mood. *A healthy diet improves gut health, and in turn health microbiota (gut bacteria) promote brain health and keep our weight in check. *A healthy diet improves brain performance at all ages, from school-age kids to their work-stressed parents. *The Mediterranean diet is linked to lower rates of Alzheimer's disease and general cognitive decline in older people. Professor Jacka, who leads the field of Nutritional Psychiatry research globally, provides not just the most recent scientific evidence but also a range of simple, practical solutions for improving the way we eat on a daily basis, including meal plans and a range of delicious recipes. This is not a diet book. This is a guide to the good habits that will protect your most precious organ, improve your quality of life and optimise mental and brain health across your lifespan. PRAISE FOR BRAIN CHANGER 'Jacka is leading the way in providing evidence-based approaches that are rooted in cutting-edge science to transform how we think about mental health.' Professor John Cryan
