This comprehensive, user-friendly introductory textbook to political psychology explores the psychological origins of political behavior. The authors introduce readers to a broad range of theories, concepts, and case studies of political activity to illustrate that behavior. The book examines many patterns of political behaviors, including leadership, group behavior, voting, race, ethnicity, nationalism, terrorism, war, and genocide. It explores some of the most horrific things people do to one another for political purposes, as well as how to prevent and resolve conflict -- and how to recover from it. The goal is to help the reader understand the enormous complexity of human behavior and the significant role political psychology can play in improving the human condition. The book contains numerous pedagogical features, including text boxes highlighting current and historical events to help students see the connection between the world around them and the concepts they are learning. Different research methodologies used in the discipline are employed, such as experimentation and content analysis. The "Political Being" is used throughout to remind the reader of the psychological theories and concepts to be explored in each chapter. New to the second edition is coverage of recent political events, including the 2008 US presidential election, Darfur, Iraq, and Afghanistan. There are now separate chapters on race, ethnic conflicts, terrorism, and conflict resolution. In addition, instructor resources are available online. Real Development, authored by Nicole Barnes, Ph.D., Montclair State University and Christine Hatchard, Psy.D., Monmouth University, uses authentic video showcasing real families, along with activities and assessments that put students in the place of a professional, to gain an understanding of key concepts. Through the combination of text and media, students are engaged in meaningful learning that deepens and enriches their understanding of developmental concepts.

Cognitive Neuroscience and Psychotherapy provides a bionetwork theory unifying empirical evidence in cognitive neuroscience and psychopathology to explain how emotion, learning, and reinforcement affect personality and its extremes. The book uses the theory to explain research results in both disciplines and to predict future findings, as well as to suggest what the theory and evidence say about how we should be treating disorders for maximum effectiveness. While theoretical in nature, the book has practical applications, and takes a mathematical approach to proving its own theorems. The book is unapologetically physical in

nature, describing everything we think and feel by way of physical mechanisms and reactions in the brain. This unique marrying of cognitive neuroscience and clinical psychology provides an opportunity to better understand both. Unifying theory for cognitive neuroscience and clinical psychology Describes the brain in physical terms via mechanistic processes Systematically uses the theory to explain empirical evidence in both disciplines Theory has practical applications for psychotherapy Ancillary material may be found at: <http://booksite.elsevier.com/9780124200715> including an additional chapter and supplements Comer and Gould's Psychology Around Us demonstrates the many-often surprising, always fascinating-intersections of psychology with students' day-to-day lives. Every chapter begins with a vignette that shows the power of psychology in understanding a whole range of human behavior. This theme is reinforced throughout the chapter in boxed readings and margin notes that celebrate the extraordinary processes that make the everyday possible and make psychology both meaningful and relevant. The text presents psychology as a unified field the understanding of which flows from connecting its multiple subfields and reinforces the fact that psychology is a science with all that this implies (research methodology, cutting edge studies, the application of critical thinking).

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it.
